

BUSINESS CASE

Working Capital Portfolio Monitoring Dashboard

Prepared By	Business Analyst
Version	1.0
Date	June 2025

1. Business Problem

The bank's working capital monitoring process is manual and spread across multiple systems. Relationship Managers and Credit Teams spend significant time consolidating data to assess OD/CC account health.

Key challenges:

- Delayed identification of stressed and overdue accounts
- No centralized view of portfolio performance and credit utilization
- Inconsistent risk assessment across teams
- Manual tracking of stock statements, deferrals, and renewals
- Limited visibility into SMA and NPA accounts

2. Proposed Solution

Develop a Working Capital Portfolio Monitoring Dashboard using SQL Server and Power BI.

The solution will:

- Consolidate data from core banking systems into a structured SQL Server database
- Track portfolio KPIs through a five-page Power BI dashboard
- Monitor credit utilization, account health, SMA/NPA status, and compliance
- Enable product-wise, industry-wise, segment-wise, and RM-wise analysis

3. Key Business Objectives

- Provide a single consolidated view of the working capital portfolio
- Enable early identification of stressed accounts
- Standardize KPI-based monitoring across teams
- Reduce manual data consolidation effort
- Improve compliance tracking for stock statements, deferrals, and renewals

4. Stakeholders

Stakeholder	Role
Credit Team	Monitor SMA/NPA accounts and compliance
Portfolio Manager	Portfolio performance and concentration analysis
Relationship Manager	Account-wise utilization and customer health
Senior Management	Portfolio-level oversight

5. Expected Benefits

Business

- Early detection of delinquency and improved risk control

- Standardized KPI-based monitoring across teams and branches
- Centralized visibility into OD/CC portfolio health

Operational

- Reduced manual MIS preparation effort
- Faster report generation and exception identification
- Improved compliance tracking for stock statements, deferrals, and renewals

6. Solution Approach

Component	Details
Data Sources	Core banking systems — Flexcube, LaserSoft, EWS
Data Processing	SQL Server — table design, KPI queries, portfolio monitoring queries
Reporting Tool	Power BI — Portfolio Overview, Risk & Compliance, Portfolio Analytics, RM Workbench, Data Export
Users	Credit Team, Portfolio Managers, Relationship Managers, Senior Management
Refresh	Daily

7. Risks & Assumptions

Risks

- Data quality issues from source systems
- User adoption challenges
- Dependency on multiple systems for data

Assumptions

- Required data is available from source systems
- Stakeholders will support validation and UAT
- SQL Server and Power BI infrastructure is available

8. Recommendation

This project is recommended as it improves portfolio visibility, supports proactive monitoring, and reduces manual effort in working capital account management. The solution helps credit and business teams make faster, informed decisions.
