

FUNCTIONAL REQUIREMENTS DOCUMENT (FRD)

Working Capital Portfolio Monitoring Dashboard

Prepared By	Business Analyst
Version	1.0
Date	June 2025

1. Introduction

This document captures the functional requirements for the Working Capital Portfolio Monitoring Dashboard — a SQL Server and Power BI based solution for monitoring OD and CC accounts.

The requirements were identified through stakeholder discussions, AS-IS process analysis, KPI definition sessions, and dashboard requirement discussions with Credit Teams, Portfolio Managers, and Relationship Managers.

The solution delivers functional capabilities across three areas:

- Data integration and SQL-based KPI processing
- Power BI dashboard reporting across five pages
- Portfolio monitoring, compliance tracking, and concentration analysis

2. Functional Requirements

FR ID cells highlighted in blue | High priority in red | Medium priority in yellow

FR ID	Requirement	Description	Dashboard / SQL Implementation	Priority
FR-01	Source Data Integration	Consolidate data from Flexcube, LaserSoft, and EWS into a structured SQL Server database	SQL Server — 13 source tables	High
FR-02	SQL Database Design	Create source tables with primary keys, foreign keys, and defined relationships	SQL Server — Database and table creation	High
FR-03	Data Validation	Validate source data for completeness, accuracy, and referential integrity before KPI calculation	SQL — Data validation queries	High
FR-04	Total Portfolio KPIs	Calculate and display Total Customers, Total Sanctioned Amount, Total Utilized Amount, and Utilization %	Page 1 — Portfolio Overview	High
FR-05	SMA and NPA Monitoring	Identify and display count of SMA and NPA accounts from the portfolio	Page 1 — Portfolio Overview	High
FR-06	Utilization Monitoring	Identify and display High Utilization and Low Utilization accounts based on defined thresholds	Page 3 — Risk & Compliance	High
FR-07	Pending Stock Statement Tracking	Identify accounts with pending stock statement submissions and display count	Page 3 — Risk & Compliance	High
FR-08	Deferral Account Tracking	Identify accounts with pending deferral documents and display count	Page 3 — Risk & Compliance	High
FR-09	Non-Churning Account Monitoring	Identify accounts with low or no transaction activity and display count	Page 3 — Risk & Compliance	High
FR-10	Product-wise Portfolio Analysis	Display sanctioned amount distributed across products	Page 4 — Portfolio Analytics	Medium
FR-11	Industry-wise Concentration	Display portfolio distribution across industry segments to track concentration risk	Page 4 — Portfolio Analytics	Medium
FR-12	Segment-wise Portfolio Analysis	Display sanctioned amount distributed across customer segments	Page 4 — Portfolio Analytics	Medium
FR-13	RM-wise Portfolio Distribution	Display portfolio distribution by Relationship Manager for accountability and performance tracking	Page 4 — Portfolio Analytics	Medium
FR-14	Dashboard Filtering	Allow users to filter dashboard views by product, industry, segment, and RM	Power BI — All Pages	Medium
FR-15	Daily Data Refresh	Refresh dashboard data daily aligned with batch data load from source systems	Power BI — Scheduled Refresh	High
FR-16	Renewal Pipeline & Action List	Identify and display upcoming and pending renewals grouped by due-date bucket, filtered to the RM's own accounts	Page 2 — RM Workbench	High
FR-17	Interest Servicing Monitoring	Identify and display accounts with overdue or unserviced interest payments	Page 2 — RM Workbench	High
FR-18	Account-Level Data Export	Provide a single wide detail table of all accounts, filterable and exportable to Excel/CSV	Page 5 — Data Export	Medium

3. Key Functional Areas

Functional Area	Requirements Covered	Implementation
Data Integration	FR-01, FR-02, FR-03	SQL Server — source tables, relationships, validation queries
Portfolio Overview	FR-04, FR-05	Power BI Page 1 — 6 KPI cards
Risk & Compliance	FR-06, FR-07, FR-08, FR-09	Power BI Page 3 — 5 compliance KPIs
Portfolio Analytics	FR-10, FR-11, FR-12, FR-13	Power BI Page 4 — 4 concentration analysis views
Dashboard Usability	FR-14, FR-15	Power BI filters and daily scheduled refresh
RM Workbench	FR-16, FR-17	Power BI Page 2 — Renewal Pipeline, Renewal Action List, Interest Servicing status
Data Export	FR-18	Power BI Page 5 — full account-level detail table

4. Non-Functional Requirements

NFR ID	Requirement	Detail
NFR-01	Data Refresh Frequency	Daily refresh aligned with source system batch updates
NFR-02	Data Accuracy	KPI calculations validated against source system data before go-live
NFR-03	Dashboard Performance	Dashboard pages should load within acceptable time on standard hardware
NFR-04	Data Completeness	All 13 source tables must be populated before dashboard refresh
NFR-05	Scalability	SQL data model designed to accommodate additional accounts and products without restructuring

5. Assumptions & Dependencies

Assumptions

- Source data from Flexcube, LaserSoft, and EWS is available and accessible for SQL Server loading
- KPI thresholds (e.g. high utilization %, low utilization %) are reviewed and approved by the Credit Team
- Business users participate in dashboard review and UAT before go-live
- Daily data refresh is sufficient for portfolio monitoring given batch-based source system updates

Dependencies

- Source system data quality and completeness across all 13 tables
- SQL queries for KPI calculation and portfolio monitoring are validated before Power BI connection
- Finalized business rules for utilization thresholds, SMA classification, and compliance tracking
- Power BI infrastructure available for dashboard deployment and daily refresh scheduling

6. Conclusion

The Functional Requirements Document defines the core data integration, KPI monitoring, compliance tracking, and portfolio analytics capabilities required for the Working Capital Portfolio Monitoring Dashboard.

All 18 functional requirements are directly mapped to their SQL Server implementation or Power BI dashboard page, ensuring full traceability from business requirement through to the final implemented solution.

The document serves as the primary reference for dashboard development, UAT, and stakeholder sign-off.
