

NON-FUNCTIONAL REQUIREMENTS DOCUMENT (NFR)

Working Capital Portfolio Monitoring Dashboard

Prepared By	Business Analyst
Version	1.0
Date	June 2025

1. Introduction

This document defines the non-functional requirements for the Working Capital Portfolio Monitoring Dashboard — a SQL Server and Power BI based solution for monitoring OD and CC accounts.

While functional requirements describe what the system does, non-functional requirements define how the solution should perform and operate.

These requirements focus on:

- Performance and dashboard load behaviour
- Data accuracy and validation
- Availability and reliability of the dashboard
- Usability and navigation experience
- Scalability to support portfolio growth
- Data refresh frequency and completeness

2. Non-Functional Requirements

NFR ID cells in blue | Category cells colour-coded by area for easy scanning

NFR ID	Category	Requirement	Description	Applicability
NFR-01	Performance	Dashboard Load Time	Each Power BI dashboard page should load within an acceptable response time under normal usage conditions	Power BI — All 5 Pages
NFR-02	Data Accuracy	KPI Validation	All KPI values displayed on the dashboard must be validated against source system data before go-live	SQL Validation Queries
NFR-03	Data Accuracy	Source Data Completeness	All 13 source tables in SQL Server must be fully populated before each dashboard refresh cycle	SQL Server — All Tables
NFR-04	Data Refresh	Refresh Frequency	Dashboard data to be refreshed daily aligned with batch data load from source systems — Flexcube, LaserSoft, and EWS	Power BI — Scheduled Refresh
NFR-05	Availability	Business Hours Availability	Dashboard should be accessible during standard business hours without downtime	Power BI Service
NFR-06	Reliability	Refresh Consistency	Scheduled daily refresh should execute consistently; any refresh failure should be flagged to the IT/BI team	Power BI — Refresh Monitoring
NFR-07	Usability	Navigation and Filters	Dashboard should support simple page navigation across five pages and allow filtering by product, industry, segment, and RM	Power BI — All Pages
NFR-08	Usability	Drill-Down Capability	Users should be able to drill down from portfolio-level KPIs to account-level details where applicable	Power BI — Page Interactions
NFR-09	Scalability	Portfolio Growth	SQL data model and Power BI reports should accommodate increasing account volumes, new products, and additional RMs without structural changes	SQL Server + Power BI
NFR-10	Scalability	Additional KPIs	SQL query structure should support addition of new KPIs in future without redesigning the data model	SQL Server — Query Layer
NFR-11	Data Retention	Historical Data	SQL Server database should retain historical data to support trend analysis and period-on-period comparison in future reporting phases	SQL Server
NFR-12	Compatibility	Power BI Access	Dashboard should be accessible via Power BI Desktop and Power BI Service on standard enterprise hardware	Power BI Desktop / Service
NFR-13	Export	Report Export	Dashboard visuals and KPI summaries should support export to Excel or PDF for offline sharing and stakeholder reporting	Power BI — Export Feature

3. Key Non-Functional Areas

Area	NFRs Covered	Implementation
Performance	NFR-01	Power BI optimised report pages
Data Accuracy	NFR-02, NFR-03	SQL validation queries; all 13 source tables validated pre-refresh
Data Refresh	NFR-04, NFR-06	Daily scheduled refresh in Power BI aligned with source batch load
Availability	NFR-05	Power BI Service uptime during business hours
Usability	NFR-07, NFR-08	Dashboard filters, page navigation, drill-down interactions
Scalability	NFR-09, NFR-10	SQL data model designed for extensibility
Data Retention	NFR-11	SQL Server historical data retention
Compatibility & Export	NFR-12, NFR-13	Power BI Desktop/Service access; Excel/PDF export

4. Assumptions & Dependencies

Assumptions

- Source data from Flexcube, LaserSoft, and EWS is batch-updated daily and available for SQL Server loading
- Power BI Service infrastructure supports daily scheduled refresh
- All 13 source tables are populated with valid data before each refresh cycle
- Business users access the dashboard via Power BI Desktop or Power BI Service on standard enterprise hardware

Dependencies

- Source system batch refresh frequency — daily updates from Flexcube, LaserSoft, and EWS
- SQL Server data preparation and validation queries executed successfully before Power BI refresh
- Power BI infrastructure availability for dashboard hosting and scheduled refresh
- Network and system availability during business hours

5. Conclusion

The Non-Functional Requirements Document defines the operational expectations for the Working Capital Portfolio Monitoring Dashboard.

These requirements ensure:

- Stable and consistent dashboard performance across all five pages
- Accurate KPI reporting through SQL-based data validation
- Reliable daily refresh aligned with source system batch updates
- A scalable SQL data model that supports future portfolio and KPI growth
- A usable, filterable dashboard experience for Credit Teams, Portfolio Managers, and Relationship Managers

The NFRs complement the Functional Requirements Document and together define the complete solution expectations for the Working Capital Portfolio Monitoring Dashboard.
