

USE CASE DOCUMENT

Working Capital Portfolio Monitoring Dashboard

Prepared By	Business Analyst
Version	1.0
Date	June 2025

1. Introduction

This document defines the use cases for the Working Capital Portfolio Monitoring Dashboard — a SQL Server and Power BI based solution for monitoring OD and CC accounts.

The use cases describe how Credit Teams, Portfolio Managers, Relationship Managers, and Senior Management interact with the dashboard to:

- Monitor portfolio performance and credit utilization
- Track SMA and NPA accounts
- Review compliance KPIs — stock statements, deferrals, and account churning
- Analyse portfolio concentration by product, industry, segment, and RM
- Export dashboard reports for stakeholder sharing

2. Use Cases

UC-01: View Portfolio Overview

UC-01 — View Portfolio Overview	
Primary Actor	Credit Team Member / Portfolio Manager
Purpose	View consolidated portfolio KPIs for the Working Capital OD/CC portfolio
Trigger	User opens Power BI dashboard — Page 1 (Portfolio Overview)
Precondition	Daily data refresh has completed successfully

Main Flow

1. User opens Power BI dashboard
2. Dashboard displays Page 1 — Portfolio Overview
3. User reviews six KPI cards: Total Customers, Total Sanctioned Amount, Total Utilized Amount, Utilization %, Total SMA Accounts, Total NPA Accounts
4. User applies filters (product, segment, RM) to refine the view
5. User identifies portfolio health and any SMA/NPA counts requiring attention

Alternate Flow

- If daily refresh has not completed, dashboard displays previous day's data
- If source data is incomplete, KPI cards may display zero or null values

Postcondition

User has reviewed portfolio-level KPIs and identified accounts or trends requiring follow-up

Acceptance Criteria	• All six KPIs display correctly and match SQL-validated source data • Filters work correctly across all KPI cards • Dashboard refreshes daily without manual intervention
FR / NFR Traceability	FR-04, FR-05, FR-15

UC-02: Monitor Risk and Compliance KPIs

UC-02 — Monitor Risk and Compliance KPIs	
Primary Actor	Credit Team Member
Purpose	Review compliance and risk KPIs to identify accounts requiring follow-up
Trigger	User navigates to Page 3 — Risk & Compliance
Precondition	Daily data refresh has completed successfully

Main Flow

1. User navigates to Page 3 on the Power BI dashboard
2. Dashboard displays five compliance KPIs: High Utilization Accounts, Low Utilization Accounts, Pending Stock Statements, Deferral Accounts, Non-Churning Accounts
3. User reviews counts for each compliance KPI
4. User applies filters by product, segment, or RM to narrow the view
5. User identifies accounts with compliance gaps and initiates follow-up

Alternate Flow

- If stock statement data is not updated in the source table, pending count may not reflect current status
- If no accounts meet the utilization threshold, KPI card displays zero

Postcondition

User has identified accounts with high utilization, pending compliance documents, or low account activity and initiated action

Acceptance Criteria	• All five KPIs on Page 3 display correctly and match SQL query outputs • High and low utilization counts apply correct threshold logic • Pending stock statements reflect accounts with overdue submissions • Deferral and non-churning counts are accurate after daily refresh
---------------------	--

FR / NFR Traceability	FR-06, FR-07, FR-08, FR-09
-----------------------	----------------------------

UC-03: View RM-wise Portfolio Distribution

UC-03 — View RM-wise Portfolio Distribution	
Primary Actor	Portfolio Manager / Branch Manager
Purpose	Monitor portfolio distribution by Relationship Manager
Trigger	User navigates to Page 4 — Portfolio Analytics and selects RM-wise view
Precondition	RM Master and Loan Account source tables are populated

Main Flow

1. User navigates to Page 4 — Portfolio Analytics
2. Dashboard displays RM-wise Portfolio Distribution with sanctioned amounts per RM
3. User filters by RM name or RM ID to view individual RM portfolio
4. User reviews portfolio size and sanctioned exposure at RM level

5. User identifies RMs with high or low portfolio concentration

Alternate Flow

- If RM Master data is incomplete, some accounts may not map to an RM
- Unassigned accounts are displayed separately or excluded depending on data quality

Postcondition

User has reviewed RM-level portfolio distribution and identified any concentration or accountability concerns

Acceptance Criteria	• RM-wise distribution displays correctly using RM Master and Loan Account data • Sanctioned amounts per RM are accurate and match SQL query outputs • Filter by RM works correctly on Page 4
---------------------	---

FR / NFR Traceability	FR-13
-----------------------	-------

UC-04: Analyse Portfolio Concentration

UC-04 — Analyse Portfolio Concentration	
Primary Actor	Portfolio Manager
Purpose	Analyse industry-wise, segment-wise, and product-wise portfolio concentration
Trigger	User navigates to Page 4 — Portfolio Analytics
Precondition	Industry Master, Segment Master, and Product Master tables are populated

Main Flow

1. User navigates to Page 4 — Portfolio Analytics
2. Dashboard displays Product-wise Sanctioned Amount, Industry-wise Concentration, and Segment-wise Sanctioned Amount
3. User reviews concentration across products, industries, and segments
4. User applies filters to drill into specific industry, segment, or product groups
5. User identifies areas of over-exposure or concentration risk

Alternate Flow

- If industry or segment mapping is incomplete in master tables, accounts may be categorised as Others

Postcondition

User has reviewed portfolio concentration and identified any industry, segment, or product-level over-exposure

Acceptance Criteria	• Industry-wise, segment-wise, and product-wise views display correctly and match source table data • Filters work correctly for industry, segment, and product dimensions • Concentration data updates correctly after daily refresh
---------------------	---

FR / NFR Traceability	FR-10, FR-11, FR-12
-----------------------	---------------------

UC-05: Export Dashboard Report

UC-05 — Export Dashboard Report	
Primary Actor	Business User / Senior Management
Purpose	Export Power BI dashboard KPIs and visuals for offline sharing
Trigger	User selects the export option on the Power BI dashboard
Precondition	Dashboard page is loaded with current data

Main Flow

1. User opens the required dashboard page (Page 1, 2, 3, 4, or 5)
2. User selects export option from Power BI
3. User chooses Excel or PDF export format
4. Power BI generates and downloads the report
5. User shares the exported report with stakeholders

Alternate Flow

- If file size is large, export may take additional time to complete

Postcondition

Dashboard report is exported successfully with correct KPI data and applied filters

Acceptance Criteria	• Reports export successfully to Excel and PDF formats • Exported data matches dashboard display values • Applied filters are reflected in the exported output
---------------------	--

FR / NFR Traceability	NFR-13
-----------------------	--------

UC-06: Senior Management Portfolio Review

UC-06 — Senior Management Portfolio Review	
Primary Actor	Senior Management
Purpose	Review consolidated portfolio-level KPIs for governance and decision-making
Trigger	User opens Power BI dashboard — Page 1 (Portfolio Overview)
Precondition	Daily data refresh has completed successfully

Main Flow

1. Senior Management user opens Power BI dashboard
2. Dashboard displays Page 1 — Portfolio Overview
3. User reviews Total Customers, Total Sanctioned Amount, Total Utilized Amount, Utilization %, Total SMA Accounts, Total NPA Accounts
4. User navigates to Page 4 — Portfolio Analytics to review product, industry, and segment concentration
5. User takes governance decisions based on portfolio KPIs

Alternate Flow

- If KPI data appears inconsistent, user escalates to IT/BI team for data validation

Postcondition

Senior Management has reviewed portfolio health and taken or deferred governance decisions

Acceptance Criteria	• All six Page 1 KPIs display correctly after daily refresh • Dashboard loads within acceptable time • KPI values are validated and consistent with SQL source data
---------------------	---

FR / NFR Traceability	FR-04, FR-05, NFR-01
-----------------------	----------------------

UC-07: Monitor Renewal & Interest Servicing

UC-07 — Monitor Renewal & Interest Servicing	
Primary Actor	Relationship Manager
Purpose	Track upcoming and pending renewals and interest servicing status for own accounts
Trigger	User navigates to Page 2 — RM Workbench
Precondition	Renewal Details and Interest Servicing source tables are populated

Main Flow

1. User navigates to Page 2 on the Power BI dashboard
2. Dashboard displays Renewal Pipeline by Bucket, Renewal Action List, and Interest Servicing – Payment Status, filtered to the RM's own accounts
3. User reviews upcoming and overdue renewals grouped by due-date bucket
4. User reviews accounts with overdue or unserviced interest payments
5. User initiates follow-up on renewals or interest servicing gaps

Alternate Flow

- If renewal due dates are missing in the source table, the account is excluded from the bucketed view
- If interest servicing data is not yet updated, the account may not reflect the latest payment status

Postcondition

User has reviewed renewal pipeline and interest servicing status for their accounts and initiated any required follow-up

Acceptance Criteria	• Renewal Pipeline by Bucket displays correctly and matches SQL query output • Renewal Action List reflects only Pending renewals • Interest Servicing – Payment Status reflects accounts with overdue or unserviced interest • All views are filtered to the logged-in RM's own accounts
---------------------	--

FR / NFR Traceability	FR-16, FR-17
-----------------------	--------------

UC-08: Export Account-Level Data

UC-08 — Export Account-Level Data	
Primary Actor	All Users
Purpose	Export a consolidated, filterable account-level detail table for offline analysis
Trigger	User navigates to Page 5 — Data Export
Precondition	Dashboard page is loaded with current data

Main Flow

1. User navigates to Page 5 on the Power BI dashboard
2. Dashboard displays a single wide detail table covering all accounts
3. User applies filters (product, industry, segment, RM) to narrow the table
4. User selects export option from Power BI
5. Power BI generates and downloads the filtered extract

Alternate Flow

- If no filters are applied, the full unfiltered account list is exported
- If file size is large, export may take additional time to complete

Postcondition

User has exported the account-level detail table matching the applied filters for further analysis

Acceptance Criteria	• Data Export table displays all required account-level fields • Filters applied on the page are reflected in the exported output • Exported data matches the values shown on the dashboard
---------------------	---

FR / NFR Traceability	FR-18
-----------------------	-------

3. Use Case Summary

UC ID	Use Case	Primary Actor	Dashboard Page	FR / NFR
UC-01	View Portfolio Overview	Credit Team, Portfolio Manager	Page 1 — Portfolio Overview	FR-04, FR-05, FR-15
UC-02	Monitor Risk and Compliance KPIs	Credit Team	Page 3 — Risk & Compliance	FR-06, FR-07, FR-08, FR-09
UC-03	View RM-wise Portfolio Distribution	Portfolio Manager, Branch Manager	Page 4 — Portfolio Analytics	FR-13
UC-04	Analyse Portfolio Concentration	Portfolio Manager	Page 4 — Portfolio Analytics	FR-10, FR-11, FR-12
UC-05	Export Dashboard Report	Business User, Senior Management	All Pages	NFR-13
UC-06	Senior Management Portfolio Review	Senior Management	Page 1 & Page 4	FR-04, FR-05, NFR-01
UC-07	Monitor Renewal & Interest Servicing	Relationship Manager	Page 2 — RM Workbench	FR-16, FR-17

UC ID	Use Case	Primary Actor	Dashboard Page	FR / NFR
UC-08	Export Account-Level Data	All Users	Page 5 — Data Export	FR-18

4. Conclusion

The use cases define how each stakeholder group interacts with the Working Capital Portfolio Monitoring Dashboard to monitor portfolio health, compliance KPIs, and concentration analysis.

All eight use cases are mapped to the implemented Power BI dashboard pages — Portfolio Overview, RM Workbench, Risk & Compliance, Portfolio Analytics, and Data Export — and traced to their corresponding functional and non-functional requirements.

The use cases support dashboard design validation, UAT planning, and stakeholder sign-off.
