

REQUIREMENT PRIORITIZATION DOCUMENT

Working Capital Portfolio Monitoring Dashboard

Prepared By	Business Analyst
Version	1.0
Date	June 2025

1. Introduction

This document defines the requirement prioritization approach for the Working Capital Portfolio Monitoring Dashboard project.

The purpose of prioritization is to:

- Identify the most critical requirements for the initial implemented solution
- Focus on core portfolio monitoring functionality first
- Align features with business value and operational needs
- Support phased implementation and clear scope boundaries

The project uses the MoSCoW prioritization technique:

Priority	Meaning
Must Have	Critical — implemented in the current solution
Should Have	Important — implemented in the current solution
Could Have	Useful enhancement — considered but not in current scope
Won't Have	Out of scope — future phase

2. Requirement Prioritization

FR ID in blue | MoSCoW Priority colour-coded | Status colour-coded: green = Implemented, yellow = Not Implemented, red = Not in Scope

FR ID	Requirement	MoSCoW Priority	Business Importance	Implementation	Status
FR-01	Source Data Integration	Must Have	Foundation for all KPI calculations and dashboard reporting	SQL Server — 13 source tables	Implemented
FR-02	SQL Database Design	Must Have	Required for structured data storage and query execution	SQL Server — Tables, PKs, FKs	Implemented
FR-03	Data Validation	Must Have	Ensures KPI accuracy before dashboard display	SQL — Validation queries	Implemented
FR-04	Total Portfolio KPIs	Must Have	Core portfolio visibility — used by all stakeholders	Page 1 — Portfolio Overview	Implemented
FR-05	SMA and NPA Monitoring	Must Have	Critical for identifying stressed accounts and NPA risk	Page 1 — Portfolio Overview	Implemented
FR-06	Utilization Monitoring	Must Have	Identifies high and low utilization accounts for follow-up	Page 3 — Risk & Compliance	Implemented
FR-07	Pending Stock Statement Tracking	Must Have	Key compliance KPI — tracks overdue submissions	Page 3 — Risk & Compliance	Implemented
FR-08	Deferral Account Tracking	Must Have	Compliance monitoring — pending deferral documents	Page 3 — Risk & Compliance	Implemented
FR-09	Non-Churning Account Monitoring	Must Have	Early warning indicator — low/no activity accounts	Page 3 — Risk & Compliance	Implemented
FR-10	Product-wise Portfolio Analysis	Should Have	Supports exposure analysis by product type	Page 4 — Portfolio Analytics	Implemented
FR-11	Industry-wise Concentration	Should Have	Tracks concentration risk across industry segments	Page 4 — Portfolio Analytics	Implemented
FR-12	Segment-wise Portfolio Analysis	Should Have	Supports segment-level exposure monitoring	Page 4 — Portfolio Analytics	Implemented
FR-13	RM-wise Portfolio Distribution	Should Have	Supports RM accountability and performance review	Page 4 — Portfolio Analytics	Implemented
FR-14	Dashboard Filtering	Should Have	Improves usability — drill-down by product, RM, segment	Power BI — All Pages	Implemented
FR-15	Daily Data Refresh	Must Have	Ensures dashboard reflects current portfolio data	Power BI — Scheduled Refresh	Implemented
FR-16	Renewal Pipeline & Action List	Must Have	Key compliance and follow-up tool for RMs — upcoming/pending renewals by bucket	Page 2 — RM Workbench	Implemented
FR-17	Interest Servicing Monitoring	Must Have	Identifies overdue interest payments — early compliance signal	Page 2 — RM Workbench	Implemented
FR-18	Account-Level Data Export	Should Have	Enables offline analysis and reporting for all users	Page 5 — Data Export	Implemented
—	Historical Trend Analysis	Could Have	Long-term trend tracking — period-on-period comparison	Not in current scope	Not Implemented
—	Automated Alerts	Won't Have	System-generated alerts for threshold breaches	Not applicable in current solution	Not in Scope
—	Role-Based Access Control	Won't Have	User-level dashboard access restrictions	Not applicable in current solution	Not in Scope

3. MoSCoW Summary

Must Have — Implemented

These requirements are critical and fully implemented in the current solution:

- Source Data Integration, SQL Database Design, and Data Validation (FR-01 to FR-03)
- Total Portfolio KPIs and SMA/NPA Monitoring (FR-04, FR-05) — Page 1
- Utilization Monitoring, Stock Statement Tracking, Deferral Tracking, and Non-Churning Monitoring (FR-06 to FR-09) — Page 3
- Daily Data Refresh (FR-15)
- Renewal Pipeline & Action List and Interest Servicing Monitoring (FR-16, FR-17) — Page 2

Should Have — Implemented

These requirements add significant business value and are fully implemented:

- Product-wise, Industry-wise, Segment-wise, and RM-wise Portfolio Analysis (FR-10 to FR-13) — Page 4
- Dashboard Filtering across all pages (FR-14)
- Account-Level Data Export (FR-18) — Page 5

Could Have — Not in Current Scope

- Historical Trend Analysis — period-on-period comparison and trend charts — considered a future enhancement phase

Won't Have — Out of Scope

- Automated Alerts — system-generated threshold breach notifications
- Role-Based Access Control — user-level permission management

4. Prioritization Factors Considered

Factor	Purpose	Applied To
Business Criticality	Requirements directly supporting SMA/NPA monitoring and portfolio visibility prioritised first	FR-04, FR-05, FR-06
Compliance Monitoring Value	Stock statement, deferral, and churning tracking prioritised due to operational risk	FR-07, FR-08, FR-09
Data Foundation Dependency	SQL integration and validation requirements must precede all dashboard KPIs	FR-01, FR-02, FR-03
User Value	Requirements benefiting multiple stakeholder groups weighted higher	FR-04, FR-14, FR-15
Analytics Enhancement	Concentration and distribution analysis valuable but secondary to core monitoring	FR-10 to FR-13
Technical Feasibility	All implemented requirements deliverable within SQL Server and Power BI without extra infrastructure	All implemented FRs

5. Assumptions & Dependencies

Assumptions

- All Must Have and Should Have requirements are implemented in the current solution

- Business stakeholders validated KPI priorities during requirement sessions
- Source data from Flexcube, LaserSoft, and EWS is available for all implemented requirements
- Could Have items (Historical Trend Analysis) may be addressed in a future enhancement phase

Dependencies

- SQL data preparation and validation queries completed before Power BI connection
- KPI business rules (utilization thresholds, SMA classification) approved by Credit Team
- Power BI environment supports daily scheduled refresh
- All 13 source tables populated before dashboard refresh cycle

6. Conclusion

The MoSCoW prioritization framework ensured that the most critical portfolio monitoring and compliance tracking requirements were implemented first in the Working Capital Portfolio Monitoring Dashboard.

All Must Have requirements — covering data integration, SQL design, Portfolio Overview KPIs, Risk & Compliance KPIs, and daily refresh — are fully implemented.

All Should Have requirements — covering Portfolio Analytics (product, industry, segment, RM-wise analysis) and dashboard filtering — are also fully implemented, delivering a comprehensive five-page monitoring solution.

Could Have and Won't Have items are clearly identified as future scope, keeping the current solution focused, implementable, and aligned with business priorities.
