

REQUIREMENT TRACEABILITY MATRIX (RTM)

Working Capital Portfolio Monitoring Dashboard

Prepared By	Business Analyst
Version	1.0
Date	June 2025

1. Introduction

The Requirement Traceability Matrix (RTM) tracks every business requirement from its origin through functional specification, SQL implementation, Power BI dashboard delivery, and user story validation.

The purpose of the RTM is to:

- Ensure all business requirements are covered in the implemented solution
- Link business requirements to functional requirements, use cases, and user stories
- Map requirements to their SQL and Power BI implementation
- Support impact analysis during requirement changes
- Confirm that business needs are fully translated into dashboard functionality

2. Traceability Flow

Layer	Purpose	Example
Business Requirement (BR)	Defines the business need identified during stakeholder discussions	Centralized portfolio monitoring
Functional Requirement (FR)	Defines what the system must do to meet the business need	FR-04 — Total Portfolio KPIs
SQL Implementation	SQL queries and data model delivering the requirement	KPI queries on Loan_Account_Table
Power BI Implementation	Dashboard page and KPI card delivering the output	Page 1 — Portfolio Overview
Use Case (UC)	User interaction flow associated with the requirement	UC-01 — View Portfolio Overview
User Story (US)	User story capturing the stakeholder need	US-01 — View Portfolio Overview
Status	Current implementation status	Implemented & Validated

3. Requirement Traceability Matrix

BR ID in blue | FR ID in teal | Must Have in green | Should Have in blue | Status all green = Implemented

BR ID	Business Requirement	FR ID	Functional Requirement	SQL Implementation	Power BI	UC	US	Priority	Status
BR-01	Consolidate data from multiple source systems	FR-01	Source Data Integration	SQL Server — 13 source tables from Flexcube, LaserSoft, EWS	All Pages	—	—	Must Have	Implemented
BR-02	Structured data model with validated relationships	FR-02	SQL Database Design	Tables, PKs, FKs, Relationships	All Pages	—	—	Must Have	Implemented
BR-03	Validate source data before KPI reporting	FR-03	Data Validation	Data validation queries across all source tables	All Pages	—	—	Must Have	Implemented
BR-04	Centralized view of total portfolio exposure and utilization	FR-04	Total Portfolio KPIs	KPI queries — Customers, Sanctioned, Utilized, Utilization %	Page 1	UC-01	US-01	Must Have	Implemented
BR-05	Identify SMA and NPA accounts across the portfolio	FR-05	SMA and NPA Monitoring	SMA/NPA queries on Loan Account and Overdue Status tables	Page 1	UC-01	US-01	Must Have	Implemented
BR-06	Monitor credit utilization — high and low accounts	FR-06	Utilization Monitoring	Utilization threshold queries on Loan_Account_Table	Page 3	UC-02	US-02	Must Have	Implemented
BR-07	Track pending stock statement submissions	FR-07	Pending Stock Statement Tracking	Stock statement queries on Stock Statement table	Page 3	UC-02	US-02	Must Have	Implemented
BR-08	Monitor accounts with pending deferral documents	FR-08	Deferral Account Tracking	Deferral queries on Deferral Documents table	Page 3	UC-02	US-02	Must Have	Implemented
BR-09	Identify accounts with low or no transaction activity	FR-09	Non-Churning Account Monitoring	Churning queries on Account Churning table	Page 3	UC-02	US-02	Must Have	Implemented
BR-10	Analyse portfolio distribution by product type	FR-10	Product-wise Portfolio Analysis	Product-wise queries on Product Master and Loan Account	Page 4	UC-04	US-05	Should Have	Implemented
BR-11	Monitor industry concentration across the portfolio	FR-11	Industry-wise Concentration	Industry queries on Industry Master and Loan Account	Page 4	UC-04	US-04	Should Have	Implemented
BR-12	Analyse portfolio distribution by customer segment	FR-12	Segment-wise Portfolio Analysis	Segment queries on Segment Master and Loan Account	Page 4	UC-04	US-04	Should Have	Implemented
BR-13	Monitor portfolio distribution by Relationship Manager	FR-13	RM-wise Portfolio Distribution	RM-wise queries on RM Master and Loan Account tables	Page 4	UC-03	US-03	Should Have	Implemented
BR-14	Enable user filtering across portfolio dimensions	FR-14	Dashboard Filtering	Power BI filter interactions — product, industry, segment, RM	All Pages	UC-01 to UC-08	US-01 to US-09	Should Have	Implemented
BR-15	Ensure dashboard reflects current portfolio data daily	FR-15	Daily Data Refresh	Scheduled daily refresh in Power BI	All Pages	UC-01 to UC-08	US-01 to US-09	Must Have	Implemented
BR-16	Track renewal pipeline and pending renewals by Relationship Manager	FR-16	Renewal Pipeline & Action List	Renewal bucket queries on Renewal_Details and Loan_Account_Table	Page 2	UC-07	US-08	Must Have	Implemented
BR-17	Monitor interest servicing payment status per account	FR-17	Interest Servicing Monitoring	Overdue interest queries on Interest_servicing	Page 2	UC-07	US-08	Must Have	Implemented
BR-18	Provide a consolidated, exportable account-level extract	FR-18	Account-Level Data Export	Wide detail query across Loan_Account_Table and related dimensions	Page 5	UC-08	US-09	Should Have	Implemented

4. Requirement Status Definitions

Status	Meaning
Identified	Business requirement identified during stakeholder discussion
Documented	Requirement captured in BRD / FRD
Implemented	SQL queries and Power BI dashboard completed
Validated	KPI values verified against source data during review
Implemented & Validated	Requirement fully implemented and confirmed accurate

5. Traceability Coverage Summary

Category	Count
Total Business Requirements (BR)	18
Total Functional Requirements (FR)	18
Must Have Requirements — Implemented	12 (FR-01 to FR-09, FR-15 to FR-17)
Should Have Requirements — Implemented	6 (FR-10 to FR-14, FR-18)
Use Cases Covered	8 (UC-01 to UC-08)
User Stories Covered	9 (US-01 to US-09)
Requirements Fully Implemented & Validated	18 of 18

6. Assumptions & Dependencies

Assumptions

- All 18 business requirements are fully implemented in the current solution
- KPI logic and business rules were approved by the Credit Team before SQL implementation
- Source data from Flexcube, LaserSoft, and EWS is available and validated
- All implemented requirements have been reviewed against SQL query outputs during dashboard validation

Dependencies

- SQL queries validated against source system data before Power BI connection
- Power BI dashboard reviewed and approved by business stakeholders
- All 13 source tables populated and referential integrity validated
- Daily refresh schedule confirmed and operational

7. Conclusion

The Requirement Traceability Matrix provides end-to-end traceability for all 18 requirements in the Working Capital Portfolio Monitoring Dashboard — from business need through functional specification, SQL implementation, Power BI dashboard delivery, and user story validation.

All 18 requirements are fully implemented and validated, covering Portfolio Overview (Page 1), RM Workbench (Page 2), Risk & Compliance (Page 3), Portfolio Analytics (Page 4), and Data Export (Page 5).

The RTM serves as the primary reference for impact analysis, change management, and UAT sign-off for this project.
