

BUSINESS RULES DOCUMENT

Working Capital Portfolio Monitoring Dashboard

Prepared By	Business Analyst
Version	1.0
Date	June 2025

1. Introduction

This document defines the key business rules used in the Working Capital Portfolio Monitoring Dashboard, covering OD/CC accounts.

The business rules support:

- SMA and NPA classification
- Utilization monitoring (high/low thresholds)
- Compliance tracking — stock statements, deferral documents, and account churning
- Portfolio concentration logic — product, industry, segment, and RM-wise
- Data refresh and validation standards

These rules standardize monitoring logic and ensure consistency in KPI calculation across the SQL Server data model and Power BI dashboard.

2. Purpose of Business Rules

The business rules are used for:

- SQL-based KPI calculations across all 19 KPIs
- Power BI dashboard reporting consistency
- SMA/NPA and utilization threshold logic
- Compliance monitoring conditions (stock statements, deferrals, churning)
- Portfolio concentration grouping logic (product, industry, segment, RM)
- Data refresh and validation standards

The rules ensure that monitoring logic remains consistent across all five dashboard pages.

3. Business Rule Categories

Category	Purpose
Classification Rules	Categorize accounts as SMA or NPA based on overdue status
Utilization Rules	Define high and low utilization thresholds
Compliance Rules	Track pending stock statements, deferral documents, and account churning
Concentration Rules	Define grouping logic for product, industry, segment, and RM-wise analysis
Data Refresh & Validation Rules	Ensure dashboard reflects validated, current data

4. Business Rules

Rule ID in blue | KPI/Dashboard Mapping colour-coded: green = Page 1, orange = Page 3, blue = Page 4, purple = All Pages

Rule ID	Rule Name	Business Rule	Business Purpose	KPI / Dashboard Mapping
BR-01	SMA Classification	Accounts are classified as SMA-0/1/2 based on overdue days as per Overdue Status table	Identify accounts showing early signs of stress	KPI-05 — Page 1
BR-02	NPA Classification	Accounts overdue beyond 90 days are classified as NPA	Identify accounts that have slipped into NPA	KPI-06 — Page 1
BR-03	Total Portfolio Exposure Calc.	Total Sanctioned and Utilized Amounts are calculated by summing Loan Account and Utilization Daily values for active accounts	Provide accurate portfolio exposure figures	KPI-02, KPI-03 — Page 1
BR-04	Utilization % Calculation	Utilization % = (Total Utilized Amount ÷ Total Sanctioned Amount) × 100	Provide overall portfolio utilization view	KPI-04 — Page 1
BR-05	High Utilization Threshold	Accounts with utilization ≥ 90% are flagged as High Utilization Accounts	Identify accounts operating close to sanctioned limit	KPI-07 — Page 3
BR-06	Low Utilization Threshold	Accounts with utilization ≤ 20% are flagged as Low Utilization Accounts	Identify underutilized facilities	KPI-08 — Page 3
BR-07	Stock Statement Compliance	Accounts with stock statement submission status = Pending and due date passed are counted as Pending Stock Statements	Track compliance gaps in stock statement submission	KPI-09 — Page 3
BR-08	Deferral Tracking	Accounts with deferral status = Pending in Deferral Documents are counted as Deferral Accounts	Track pending deferral documentation	KPI-10 — Page 3
BR-09	Account Churning Identification	Accounts with no significant credit/debit movement over the defined monitoring period are flagged as Non-Churning Accounts	Identify low-activity accounts as an early warning indicator	KPI-11 — Page 3
BR-10	Concentration Grouping Logic	Sanctioned amounts are grouped by Product, Industry, Segment, and RM using respective Master tables	Support portfolio concentration analysis	KPI-12 to KPI-15 — Page 4
BR-11	Data Refresh Validation	Dashboard data is refreshed only after all 13 source tables are validated and populated	Ensure reporting accuracy and completeness	All Pages — Daily Refresh
BR-12	Filter Consistency	Filters applied on one dashboard page (product, industry, segment, RM) follow consistent values defined in Master tables across all pages	Ensure consistent filtering experience across the dashboard	All Pages — Power BI Filters
BR-13	Renewal Bucket Classification	Accounts in Renewal_Details are grouped into due-date buckets based on days remaining to Renewal_Due_Date, and excluded once Renewal_Status = Completed	Give RMs a prioritized view of upcoming and pending renewals	KPI-16 — Page 2
BR-14	Interest Servicing Overdue Rule	Accounts in Interest_servicing are flagged overdue when Serviced_Date is after Due_Date, or Serviced_Date is blank	Identify accounts with unserviced or late interest payments	KPI-18 — Page 2

5. Rule Dependencies

The business rules depend on:

- Data availability from Flexcube, LaserSoft, and EWS
- Finalized utilization thresholds (high/low) approved by the Credit Team
- Approved SMA/NPA classification logic aligned with overdue status data
- Daily data refresh schedule and validation of all 13 source tables
- Consistent Master table data (Product, Industry, Segment, RM) for concentration analysis

6. Impacted Dashboard Pages

Dashboard Page	Impacted Rules
Page 1 — Portfolio Overview	BR-01, BR-02, BR-03, BR-04
Page 3 — Risk & Compliance	BR-05, BR-06, BR-07, BR-08, BR-09
Page 4 — Portfolio Analytics	BR-10
Page 2 — RM Workbench	BR-13, BR-14
Page 5 — Data Export	BR-12
All Pages	BR-11, BR-12

7. Rule Validation Approach

The business rules are validated through:

- Stakeholder review discussions with the Credit Team and Portfolio Managers
- SQL-based logic validation — testing each rule against source table data
- Dashboard reconciliation — comparing Power BI outputs against SQL query results
- High-level UAT review before go-live

This ensures reporting consistency and accurate KPI calculations across all five dashboard pages.

8. Conclusion

The business rules define the classification, utilization, compliance, and concentration logic used in the Working Capital Portfolio Monitoring Dashboard.

The rules support:

- Consistent SMA/NPA classification across the portfolio
- Standardized utilization thresholds for high and low utilization monitoring
- Reliable compliance tracking for stock statements, deferrals, and account churning
- Consistent concentration analysis across product, industry, segment, and RM dimensions
- Accurate, validated, and daily-refreshed dashboard reporting

These rules ensure that monitoring logic remains consistent and traceable across SQL Server and Power BI, supporting accurate portfolio-level decision-making.
