

PROJECT INITIATION DOCUMENT (PID)

Working Capital Portfolio Monitoring Dashboard

Prepared By	Business Analyst
Version	1.0
Date	June 2025

1. Project Overview

This project focuses on improving monitoring of the bank's Working Capital portfolio — primarily OD and CC accounts — through a centralized Power BI dashboard backed by SQL Server.

Currently, portfolio monitoring is handled manually using data from multiple systems, making it difficult to track account health, utilization patterns, and compliance status in a timely manner.

The proposed solution consolidates portfolio data into a structured SQL Server database and presents it through a five-page Power BI dashboard covering Portfolio Overview, RM Workbench, Risk & Compliance, Portfolio Analytics, and Data Export.

2. Business Problem

The existing Working Capital monitoring process depends on data spread across multiple systems:

- Flexcube (Core Banking)
- LaserSoft
- Early Warning Systems (EWS)

Key challenges:

- Delayed identification of SMA and NPA accounts
- Heavy dependency on spreadsheets and manual MIS
- No centralized portfolio visibility
- Inconsistent monitoring across Relationship Managers
- Manual tracking of stock statements, deferrals, and renewals
- Difficulty monitoring utilization patterns and account churning

3. Proposed Solution

Develop a Working Capital Portfolio Monitoring Dashboard using SQL Server and Power BI.

The solution will:

- Consolidate data from core banking source systems into SQL Server
- Process source tables: Customer Master, Loan Account, Utilization Daily, Overdue Status, Stock Statement, Deferral Documents, Renewal Details, GST3B Sales, Account Churning, Interest Servicing, and others
- Track portfolio KPIs across five dashboard pages
- Enable product-wise, industry-wise, segment-wise, and RM-wise analysis
- Support proactive monitoring and compliance tracking

4. Business Objectives

- Provide a single consolidated view of the working capital portfolio
- Enable early identification of SMA and NPA accounts
- Standardize KPI-based portfolio monitoring across teams
- Reduce manual data consolidation and MIS preparation effort

- Improve compliance tracking for stock statements, deferrals, and renewals
- Support data-driven decision-making for credit and business teams

5. Key KPIs Monitored

S. No	Dashboard Page	KPI
1	Portfolio Overview	Total Customers
2	Portfolio Overview	Total Sanctioned Amount
3	Portfolio Overview	Total Utilized Amount
4	Portfolio Overview	Utilization %
5	Portfolio Overview	Total SMA Accounts
6	Portfolio Overview	Total NPA Accounts
7	Risk & Compliance	High Utilization Accounts
8	Risk & Compliance	Low Utilization Accounts
9	Risk & Compliance	Pending Stock Statements
10	Risk & Compliance	Deferral Accounts
11	Risk & Compliance	Non-Churning Accounts
12	Portfolio Analytics	Product-wise Sanctioned Amount
13	Portfolio Analytics	Industry-wise Concentration
14	Portfolio Analytics	Segment-wise Sanctioned Amount
15	Portfolio Analytics	RM-wise Portfolio Distribution
16	RM Workbench	Renewal Pipeline by Bucket
17	RM Workbench	Renewal Action List (Pending Renewals)
18	RM Workbench	Interest Servicing – Payment Status
19	Data Export	Portfolio Detail – Full Account Extract

6. Scope

In Scope

- Working Capital OD/CC portfolio monitoring
- SQL Server database design, table creation, and KPI queries
- Power BI dashboard — five pages covering Portfolio Overview, RM Workbench, Risk & Compliance, Portfolio Analytics, and Data Export
- Utilization monitoring, SMA/NPA tracking, compliance monitoring
- RM-wise, product-wise, industry-wise, and segment-wise analysis

Out of Scope

- Loan origination and credit appraisal
- Customer onboarding and KYC
- Collections and recovery

- Retail loan products
- Core banking transaction processing

7. Key Stakeholders

S. No	Stakeholder	Responsibility
1	Credit Team	SMA/NPA monitoring, compliance tracking
2	Portfolio Manager	Portfolio performance and concentration analysis
3	Relationship Manager	Account-wise utilization and customer follow-up
4	Branch Manager	Branch-level portfolio oversight
5	IT / BI Team	SQL Server and Power BI development support
6	Senior Management	Portfolio-level visibility and strategic oversight

8. Expected Benefits

Business

- Centralized visibility into OD/CC portfolio health
- Early detection of SMA and NPA accounts
- Standardized monitoring across teams and branches

Operational

- Reduced manual MIS preparation effort
- Faster portfolio reporting and exception identification
- Improved compliance tracking for stock statements, deferrals, and renewals

9. Success Criteria

Criteria	Target
Portfolio dashboard available to all users	Yes — single Power BI report
SMA and NPA accounts visible in real time	Daily refresh
Pending stock statements and deferrals tracked	100% coverage
RM-wise and industry-wise analysis enabled	Yes — Portfolio Analytics page
Reduction in manual MIS effort	Measurable reduction post go-live

10. Conclusion

The Working Capital Portfolio Monitoring Dashboard addresses the core monitoring gaps faced by credit and business teams managing OD/CC portfolios. By consolidating data from multiple source systems into SQL Server and presenting it through a structured Power BI dashboard, the solution enables proactive monitoring, reduces manual effort, and improves portfolio visibility across all key dimensions.
