Future State

Working Capital Portfolio Monitoring Dashboard

Prepared By	VISHAL VENKATESH
Version	1.0
Date	June 2025

1. Future-State Process Overview

The future-state solution introduces a centralized, dashboard-driven Working Capital Portfolio Monitoring process for OD and CC accounts.

Instead of manually accessing multiple systems and consolidating data into spreadsheets, business users — Credit Teams, Portfolio Managers, and Relationship Managers — can monitor the entire portfolio through a structured five-page Power BI dashboard backed by SQL Server.

The solution improves:

- Portfolio visibility across all OD/CC accounts
- SMA and NPA account monitoring with daily refresh
- Compliance tracking for stock statements, deferrals, and renewals
- Product-wise, industry-wise, segment-wise, and RM-wise portfolio analysis
- Operational efficiency by eliminating manual MIS preparation

2. Future-State Monitoring Process — Step by Step

Step	Actor	Future-State Activity	System
1	IT / Data Team	Source data extracted from Flexcube, LaserSoft, and EWS and loaded into SQL Server	Flexcube, LaserSoft, EWS → SQL Server
2	IT / Data Team	Data validated and structured across 13 source tables: Customers_Table, Loan_Account_Table, Overdue_status, Stock_Statement, Deferral_Documents, Renewal_Details, Account_Churning, Interest_servicing, GST3B_Sales, Product_Master, Segment_Master, Industry_Master, and RM_Master	SQL Server
3	IT / Data Team	KPI queries and portfolio monitoring queries executed in SQL Server to calculate all dashboard metrics	SQL Server
4	IT / BI Team	SQL Server data connected to Power BI and dashboard refreshed daily	Power BI
5	Credit Team / Portfolio Mgr	User opens Page 1 (Portfolio Overview) — Total Customers, Sanctioned Amount, Utilized Amount, Utilization %, SMA Accounts, NPA Accounts	Power BI — Page 1
6	Credit Team	User navigates to Page 3 (Risk & Compliance) — High Utilization, Low Utilization, Pending Stock Statements, Deferral Accounts, Non-Churning Accounts	Power BI — Page 3
7	Portfolio Manager	User navigates to Page 4 (Portfolio Analytics) — Product-wise, Industry-wise, Segment-wise, RM-wise distribution	Power BI — Page 4
8	RM / Credit Team	User applies filters — by product, industry, segment, or RM — to drill into specific portfolio segments	Power BI — All Pages
9	Credit Team / Portfolio Mgr	User identifies accounts for follow-up — high utilization, pending compliance, SMA accounts — and initiates action	Power BI → Action
10	Senior Management	User reviews portfolio KPIs and concentration analysis for governance and decision-making	Power BI — Page 1 & 4
11	Relationship Manager	User opens Page 2 (RM Workbench) — reviews Renewal Pipeline by Bucket, Renewal Action List, and Interest Servicing Payment Status filtered to their own accounts	Power BI — Page 2
12	All Users	User opens Page 5 (Data Export) — exports the full account-level detail table for further analysis	Power BI — Page 5

3. Key Monitoring Capabilities

- Centralized portfolio view replacing manual multi-system access
- Daily KPI refresh covering all 19 portfolio monitoring metrics
- SMA and NPA account tracking with direct count visibility
- Compliance monitoring — stock statements, deferral documents, and non-churning accounts
- Credit utilization monitoring — high and low utilization accounts tracked
- Industry, product, segment, and RM-wise portfolio distribution analysis
- Drill-down filtering across all five dashboard pages
- Elimination of manual Excel-based MIS preparation

4. Power BI Dashboard Structure

Dashboard Page	KPIs Monitored	Primary Users
Page 1 — Portfolio Overview	Total Customers, Total Sanctioned Amount, Total Utilized Amount, Utilization %, Total SMA Accounts, Total NPA Accounts	Credit Team, Portfolio Manager, Senior Management
Page 2 — RM Workbench	Renewal Pipeline by Bucket, Renewal Action List, Interest Servicing – Payment Status	Relationship Manager
Page 3 — Risk & Compliance	High Utilization Accounts, Low Utilization Accounts, Pending Stock Statements, Deferral Accounts, Non-Churning Accounts	Credit Team, Operations Team, Compliance Team
Page 4 — Portfolio Analytics	Product-wise Sanctioned Amount, Industry-wise Concentration, Segment-wise Sanctioned Amount, RM-wise Portfolio Distribution	Portfolio Manager, Senior Management
Page 5 — Data Export	Portfolio Detail – Full Account Extract	All Users

5. SQL Server Data Layer

Component	Details
Source Tables	Customers_Table, Segment_Master, Industry_Master, RM_Master, Product_Master, Loan_Account_Table, Overdue_status, GST3B_Sales, Account_Churning, Interest_servicing, Stock_Statement, Deferral_Documents, Renewal_Details
SQL Work	Database creation, table creation, primary keys, foreign keys, relationships, data validation queries, KPI queries, portfolio monitoring queries, compliance monitoring queries
KPI Output	All 19 Power BI KPIs calculated through SQL queries before loading into Power BI

6. Comparison — AS-IS vs TO-BE

Monitoring Area	AS-IS (Current)	TO-BE (Future)
Data Access	Manual login to Flexcube, LaserSoft, EWS separately	Single Power BI dashboard with consolidated data
SMA / NPA Tracking	Manual identification across systems	Automated count — daily refresh
Compliance Tracking	Manual Excel tracking	Pending stock statements, deferrals visible on Page 3
Portfolio Analysis	Not available	Product, industry, segment, RM-wise views on Page 4

Monitoring Area	AS-IS (Current)	TO-BE (Future)
MIS Preparation	Manual — hours of effort	Automated — daily refresh
Monitoring Consistency	Varies by RM and branch	Standardized KPIs across all users

7. Expected Business Benefits

- Centralized portfolio visibility — all OD/CC accounts monitored in one place
- Faster SMA and NPA identification — daily refresh replaces delayed manual review
- Improved compliance tracking — stock statements, deferrals, and non-churning accounts visible on demand
- Reduced operational effort — manual MIS preparation eliminated
- Standardized monitoring — consistent KPI definitions applied across all teams and branches
- Portfolio concentration insights — industry, product, and segment-wise analysis available instantly

8. Future-State Summary

The TO-BE process replaces the fragmented, manual monitoring approach with a centralized, SQL Server-backed Power BI dashboard solution.

Data from Flexcube, LaserSoft, and EWS is consolidated into a structured SQL Server database, KPIs are calculated through SQL queries, and results are presented through a five-page Power BI dashboard refreshed daily.

Credit Teams, Portfolio Managers, Relationship Managers, and Senior Management can monitor the entire Working Capital OD/CC portfolio — utilization, SMA/NPA status, compliance, and concentration — from a single dashboard, enabling faster decisions and proactive portfolio management.
